Ideas

- https://discoverquickly.com/, does a great job of recommending artists and is probably the best implementation on the list. **The idea to play the artist's top song on hovering is great in my opinion. Moreover, the songs start somewhere in the middle which is also clever because it saves time and the user is also able to discover artists quicker.**

- https://www.last.fm/dashboard, the UI for showing artist is appealing and can be a good starting point.

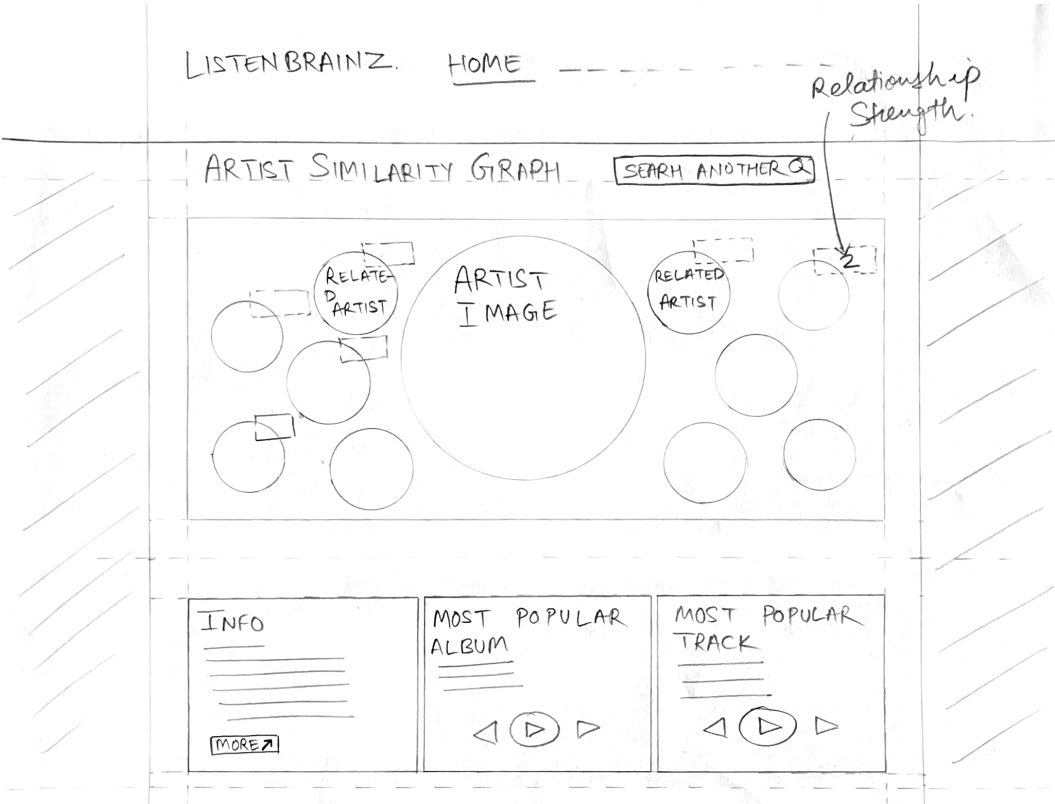

Initial Vision

I have put together a sample UI incorporating some of the ideas I have come across.
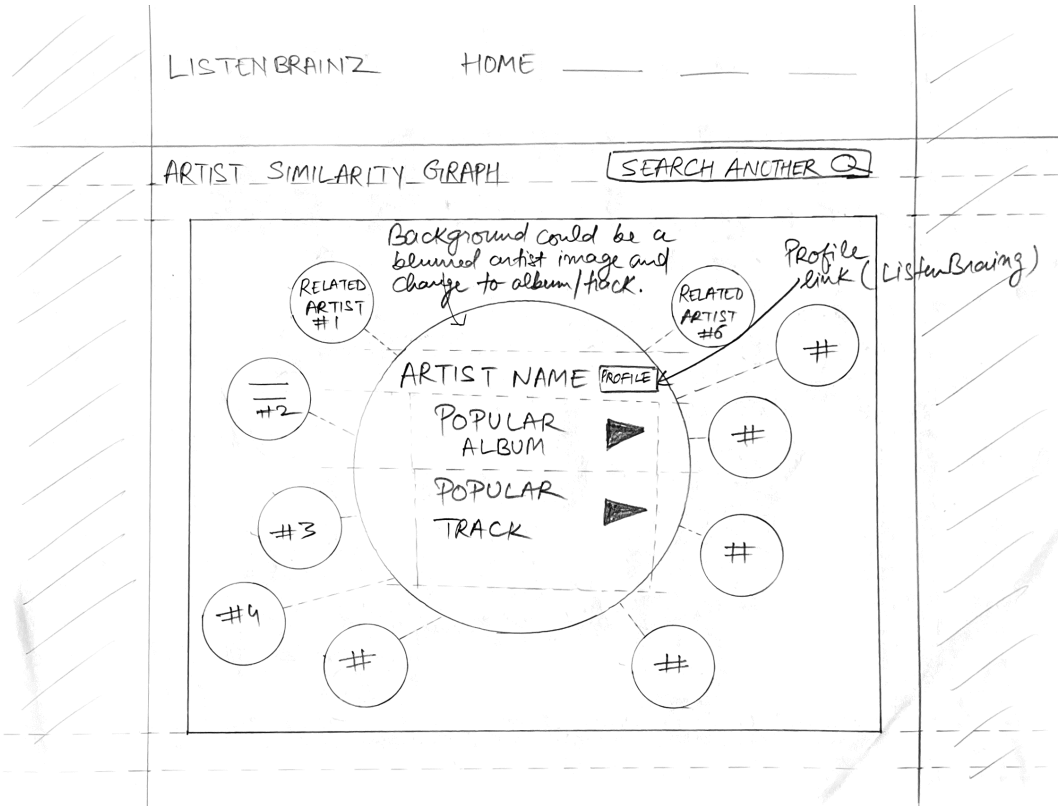

I have more sample sketches which might be worthwhile to look at.

1. Idea 1: A mix between visual and descriptive elements.

2. Idea 2: Design focusing more on the visual aspect.
